Status of Project:

Core FastAPI backend server, database schemas on Supabase, and full React (Vite) telemetry/assistant frontend dashboard have been fully established. Personas for 11 clinical voice agents (appointments, reminders, SOS dispatch) are configured with Groq APIs.

% of Project Completed so far: 75%

Is the Project can be exhibited in any competition or Project expo in future ?

Yes

Is the Project documentation / Presentation soft copy verified by your guide?

Yes

Is the Project details uploaded in AICTE YUKTI portal ?

Yes

Project Guide Remarks and suggestions:

The architecture shows comprehensive design. Optimize voice response turn-taking latency below 800ms and deploy robust safety boundaries for non-diagnostic queries.

Project Plan for next Review:

Integrate Twilio WebSockets for production voice-telephony streams, deploy frontend/backend to Vercel/Railway, and perform end-to-end load testing.

Approved for Review Presentation: Yes
